

Pleated Blinds

Energy Saving Blinds for Green Buildings

Verosol's signature product. Pleated blinds, (sometimes referred to as pleated shades), are made from a pleated fabric that pulls up to sit flat at the top of a window. They offer unique softness and texture. Pleated Blinds are neat and elegant, with a small stack height and minimal projection, resulting in a 'clean' look to any interior with generous outside views.

Verosol pleated blinds come with a substantial list of benefits. Firstly, they're wonderfully easy to operate, with a simple cord pull system which will allow users to set the desired height of the blinds. If you want them fully closed, simply pull down on the cord to release the lock and slowly lower the blind the full way down. Pleated blinds are a particularly worthwhile investment; they offer improved temperature control by reflecting the sun's rays in the hottest summer months, and they're a boon in winter as they assist in insulating your windows, ideal for saving energy.

Heat & Light Control

Pleated Blinds are the ideal solution for heat and light control. With minimal light gaps, Pleated Blinds effectively reduce glare, giving you a comfortable living and working environment.

Combine Verosol's Pleated Blinds with our metallised fabrics for superior UV and heat protection, keeping your home cool in summer and warm in winter. The Originals Fabric Collection offers a vibrant palette of colours.

Privacy

The Twin Pleated Blind is extremely practical, giving you the option to select two fabrics. Select a sheer fabric to enjoy the daytime view with subtle light filtering, and select a blackout fabric for privacy, room darkening and insulation at night.

With the Vario Pleated Blind you have the option to raise the blind in the conventional way or from the top down towards the window sill, making it useful for when privacy is required down low but sunlight is also required. Vario Pleats are ideal for bathrooms.
